EDUCATION

Curtin University

Perth, WA

2022 July – 2026 January

Bachelor of Computing

Soft. Engineering Major ([View](#))

Monash University

Monash Online

2026 June - 2027 Jan (Current)

Postgraduate Certificate

In Artificial Intelligence

CERTIFICATIONS

- Google AI Essentials
- Make Agentic AI work for you
- Data Manipulation with Pandas
- Data Communication Concepts
- PostGre SQL Summary Stats and Window Functions

SKILLS

Java, Python, JavaScript, HTML, CSS,
React, Node.js, Express, TypeScript, Vue.js,
.NET, C#, C++, Machine Learning, Applied AI
Git, Scrum, Jira
Pandas data manipulation, MySQL
GitHub, GitLab & Bitbucket
Teamwork & Collaboration
Android Studio
Python in Business Programming
Canvas API

REFERENCES

PROFILE

Software Engineering Graduate on a [Temporary Graduate \(485\) visa](#).
Seeking to use my skillset and receive hands-on experience in the software industry.
Proficient in data structures and algorithms, JavaScript frameworks, agile development principles, design analysis of algorithms, .NET frameworks, object-oriented design principles using Java and Machine Learning using Python in Artificial Intelligence. Eager to be involved in a collaborative team environment and committed to receive industry exposure and learn throughout.

PROJECTS

Sessional Manager (Capstone University Project) - [JavaScript, HTML, CSS](#)

Collaborated in a system project developed to replace the manual sessional staff management system in the School of Design and the Built Environment. Followed an agile development process and strict documentation with the team and acted as the Scrum and Merge Master and project lead in the development process. React for frontend and followed a JavaScript stack hosted locally. Designed entire UI from scratch and took initiative in implementing the user-system interaction interface completely. Supervisor approved update reports for each sprint ([IR's accordingly](#)).

Finance Tracker Tool ([View](#)) - [JavaScript, HTML, CSS](#)

Developed a full-stack web application that tracks your finances with real-time data visualisation. The application is deployed and live using Vercel and Render demonstrating cloud deployment.

Vibebot ([View](#)) - [Python](#)

An AI-Powered music recommendation chatbot that suggests songs and playlists according to your mood and personal preferences. It combines a training ML model and Spotify API to deliver personalised recommendations and live through Streamlit.

Chatbot-widget for Bellagio Casino UI - [Vue, TypeScript, SCSS](#)

Collaborated on developing a floating chatbot widget for the websites UI, representing an agent and customer chat from the Business API.

CPU-Scheduling-Visualizer ([View](#)) - [JavaScript, HTML, CSS](#)

Web-based application developed primarily using JavaScript for visualisation logic and HTML for UI Structure and CSS for styling for studying and simulating scheduling algorithms in Operating Systems and deployed using Github pages.

Building Evacuation Path Planner - [C#, C++, C, CMake](#)

In-development .NET core project using C#, C++ and mainly design analysis of algorithms concepts in rendering the optimal path in an evacuation blueprint.

Multithread Sorting Simulation - [C](#)

A sorting simulation using multiple threads and inter-thread communications.

UAV Bushfire Monitoring - [Java](#)

A bushfire monitoring system that uses Data Structures and Algorithm Concepts.

Visit my [GitHub](#) for more.
